文化保存 I（影片4.5分+口說3分）

EC

(在展館外面開場) 各位貴賓大家好，接下來將進行約20分鐘的導覽，請大家先配戴完成導覽設備，設備是單耳耳機，如果大家都配戴完成那現在進行聲音測試，123~123請沒聽到聲音的貴賓揮個手，會有工作人員會協助，123~123再次聲音測試，大家設備都配戴完成，現在將開始進行今天的導覽。首先介紹台友達中廠從建廠開始的環境教育。

「歡迎大家蒞臨友達西大墩窯文化館，這裡是友達的永續展館，也是環境教育基地。友達台中廠建廠時發現清代燒陶窯的遺跡—“西大墩窯” ，我們將它保存也開始就投入環境教育的發展，2014年台中廠就取得環境教育場所認證，成為台灣第一個製造業擁有環境教育基地，這10年來帶領許多學生學習，也結合SDGs指標發展永續教育。 2020年也將原本用於台中花博的友達微美館為“西大墩窯文化館”」

接著，邀請大家進入展館參觀，這邊請。

(帶進展館) 請找個舒服的位置坐下。 接下來要讓大家觀賞一支影片，這支影片會有關於友達在文化保存及西大墩窯的故事說明

(影片結束後) 透過影片我們可以知道，友達希望傳遞的理念是，在科技發展的同時也能與在地文化共存，我們選擇將在地文化持續傳承下去，更結合環境教育課程帶領學生學習，大家也可以環展館四周有許多的互動式展具，也希望藉由這些展具讓學生可以用輕鬆的方式去學習文化保存和環境教育的知識，接下來我們請下一位夥伴位大家介紹文化保存展具，請大家轉身或轉頭看向後方。。

(Outside the museum, at the start) Hi everyone! We'll have about 20 minutes for a guided tour. First, please put on your headphones — they're single-ear ones. Once everyone has them on, we'll do a quick sound check. "1, 2, 3~test~" If you can't hear anything, raise your hand and staff will help you. Let's try again: "1, 2, 3~test~" Okay, now that everyone's ready, let's start the tour.

Welcome, everyone, to AUO's SIDADUN Kiln Museum! This is our sustainability exhibit and environmental education center. When AUO's Taichung Factory was built, we discovered relics of a Qing Dynasty kiln called the "SIDADUN Kiln." We saved and protected these relics, and since then, we've been focused on environmental education.

In 2014, our factory was certified as Taiwan's first manufacturing site with an environmental education center. Over the past 10 years, we've led many students to learn about sustainability and incorporated SDG goals into our lessons.

In 2020, we turned the AUO Micro Museum, originally used for the Flower Expo here in Taichung, into the SIDADUN Kiln Museum.

Now, I invite you all to come inside the museum. Please follow me.

(Leading into the museum) Find a comfortable spot to sit down. We're going to watch a short video about AUO's work in preserving culture and the story of the SIDADUN Kiln.

(After the video) So, from the video, we see that AUO really wants to show that tech and local culture can grow side by side. We're all about keeping local traditions alive while also teaching about the environment. That's why we've combined cultural preservation with fun, easy-to-understand learning like interactive exhibits.

There are lots of cool displays around the museum that make learning about culture and protecting the environment simple and fun. We want students to enjoy learning without feeling overwhelmed.

Now, I'll ask my colleague to come up and show you some of the cultural preservation displays. Please turn around or look behind you.

文化保存II（口說3.5分）

Jhen

大家好，現在各位眼前的展區是”讓文物活過來”，呈現的是用五個步驟「土、形、釉、火、活」說明清代先民的製陶過程，讓大家瞭解西大墩窯如何燒製陶製品的。
土－首先是原料土，在地大肚山的土是紅土，加水後會具有黏性，因此適合製作成陶器。
形－有了原料後，即可開始製作陶器，依據要製作物品的大小可分成2種方式進行塑形，中小型會使用「手拉胚」，向剛剛影片中有袋到的製陶畫面就是;若為大型的陶器則使用「手擠坯」的方式製作，會將陶土製作為條狀，並使用木槌及其他工具調整為需要的形狀。
釉－目的是為了防水，上釉後，物品會有一層像是玻璃的亮面，但多一道流程也會影響到價格，因此西大墩窯所生產的民生用品多為內部或局部上釉而已。
火－接下來要使用火來進行燒製了，大家可以看到展櫃裡面還有其他道具，這些道具是在燒製前使用，剛剛有提到紅土有黏性，因此須要有這些道具將每一個作品分開，才不會燒完都黏在一起無法分開。像是這樣。
活－最後製作好的成品會由「人力」挑至聚落及市集中販售。
認識了製陶流程，接下來請大家看向右手邊。

Hi everyone! Right in front of you is an exhibit called "Bringing Artifacts to Life." It explains the traditional pottery-making process from the Qing Dynasty using five steps: Soil, Shape, Glaze, Fire, and Live. This helps us understand how the SIDADUN Kiln produced pottery.
Soil – First, is the raw material, which is clay. The clay from Dadu Mountain is red and, when you add water, it becomes sticky. This makes it perfect for making pottery.
Shape – After getting the clay, you can start shaping it. Depending on how big the object will be, there are two ways to do this. For small or medium items, they use “hand-throwing”—the same method you saw in the video with the pottery wheel. For larger items, they use “coil-building,” which means rolling the clay into strips and then using tools and hammers to shape it.
Glaze – The purpose of glaze is to make the pottery waterproof. After applying glaze, the surface becomes glossy and glass-like. However, glaze adds more steps and costs more. Most everyday items from SIDADUN Kiln are only partially glazed or glazed inside.
Fire – Next, the pottery is fired in a kiln using fire. In the display cabinet, you’ll see tools used before firing. Because the clay is sticky, these tools are used to keep each piece separated so they don’t stick together during firing. Like this.
Live – Finally, the finished products are carefully carried to towns and markets to sell, made by people.
Now that you’ve learned about the pottery-making process, please turn and look to your right.

這裡是”關於考故這件事”，呈現的是考古的相關知識，上面是考古會用到的設備，下面這裡在介紹的是考古的流程，從文獻查詢、現場開挖到清洗及編碼，最後到了修復，透過考古可以讓大家認識及驗證過去先人的生活和歷史。
除了前面所介紹關於文化保存的內容外，西大墩窯文化館現在也是多應用場域，有智慧技術應用和全綠電應用，接下來請下一位夥伴為大家展館的智慧技術應用。

This area is called "About Archaeology." It shows some tools and explains the process—researching, digging, cleaning, tagging, and restoring artifacts. Archaeology helps us learn about our ancestors and history.
Besides the cultural preservation, the SIDADUN Kiln Culture Museum is also a place where new technology is being used. It features smart technology and green energy.
Next, I’ll invite my teammate to share more about the smart technology used in this museum.

智慧技術(4口說+2互動)

AMC

大家好，接下來向各位說明西大墩窯文化館在智會技術的應用。
友達自2018年開始規劃內部展覽分享智慧製造技術，西大墩窯文化館也因應相關展覽及智慧製造技術發展而導入了兩大技術，成為了場域應用示範區域。
首先在各位眼前的是西大墩窯文化館與公司先進製造發展中心合作開發的互動展具，名字叫「文化蟲洞」，它運用了生成式AI技術、圖文匹配技術進行展具的開發，接下來邀請1~3位貴賓上來體驗。
Hello everyone! Next, I'll explain how the SIDADUN Kiln Museum is using smart technology.
Since 2018, AUO has been planning internal exhibitions to showcase our smart manufacturing skills. The SIDADUN Kiln Museum has also adopted two key technologies related to these innovations, becoming a demonstration site for smart tech applications.
First, in front of you is an interactive display called "Cultural Wormhole," developed in cooperation with our Advanced Manufacturing Development Center. It uses generative AI and image-text matching technology.
Now, I'd like to invite 1 to 3 volunteers to come up and try it out.
首先請貴賓看向左前方鏡頭，要拍一張照片，(倒數)笑一個~
接下來照片會開始生成，大約需要30秒左右的時間，等候的同時畫面也會有關於生成式AI技術應用的說明，這項技術除了可以應用在類似西大墩窯文化館的藝文展館外，也可以應用在媒體業去生成講稿，或是實驗室去生成數據進行模型訓練。
而「文化蟲洞」展具則會生成出符合西大墩窯歷史背景的照片，讓人藉由拍照有回到過去的感覺，生成的照片也可以掃描QR Code後下載，有生成前和生成後的照片可以下載。
First, I'd like the guests to look at the camera in the front-left direction for a quick photo. On the count of three, everyone smile!
After that, the photo will start being generated, which takes about 30 seconds. While you wait, there will be an explanation on the screen about how generative AI works. This technology isn't only used in places like the SIDADUN Kiln Museum — it can also help in media to generate scripts or in labs to create data for training models.
The "Cultural Wormhole" display will generate a picture that matches the history of the SIDADUN Kiln, making you feel like you've traveled back in time just by taking a photo.
Once the picture is generated, you can scan the QR code to download it. There will be both the original photo before generation and the finished image available for download.
除了生成式AI技術應用外，我們也導入「人流辨識技術」，在入口處可以看到目前展館人數統計、熱門展區等資訊，這項應用是於展館天花板設置魚眼鏡頭並取得影像資料，再以演算法及AI模型實現人員計數與電子圍籬應用，對於展館的營運管理有相當大的幫助，也可作為未來活動安排與展區調整的參考依據。
以上兩項技術說明是關於於西大墩窯文化館在智慧技術的應用，接下來邀請各位貴賓與我們一起移動至最後一個展區，將進行全綠電應用的解說。
In addition to the generative AI technology, we've also introduced "people flow recognition" technology. At the entrance, you can see real-time info like the current visitor count and popular zones. This system uses fish-eye cameras on the ceiling to capture images, then applies algorithms and AI models to count people and create electronic boundaries.
This helps with managing the museum more effectively and can also assist in planning future events and adjusting exhibit areas.
These two technologies highlight how SIDADUN Kiln Culture Museum is using smart tech.
Now, I'd like to invite everyone to move with us to the last exhibit area, where we'll introduce how we use 100% green energy.

全綠電（2口說）

Energy

最後一個區域為友達的企業理念區，西大墩窯並非唯一的文化保存區域，在蘇洲以及廈門建廠時也皆有文化保存經驗，友達不僅扮演著開發者角色，更成為兼顧在地文化資產保存的守護者。
2022年我們在西大墩窯遺址及這裡的屋頂建置太陽能板，並結合儲能櫃打造「全綠電」場域，請各位看向下方的能源管理系統，透過此系統能進行發電量及用電量分析、並且可以呈現使用綠電節省的金額或減少碳排，有效落實能源管理。
友達的太陽能發展已從創能走向儲能，並可提供全方位的軟硬體解決方案，我們也以實際行動呼應企業邁向淨零碳排的使命，並也將“淨零”議題結合環境教育的課程，實踐友達在永續上的理念。
今天的導覽到此結束，感謝貴賓的聆聽，貴賓也可到戶外合影留下紀念。
The final area is AUO’s Corporate Philosophy Zone. The SIDADUN Kiln is not the only cultural preservation site. When we built factories in Suzhou and Xiamen, we also preserved local culture. AUO acts not only as a developer but also as a protector of local cultural assets.
In 2022, we installed solar panels on the SIDADUN site and rooftops, creating a “fully green energy” space with energy storage. Please look at the energy management system below. It shows data on electricity generation and usage, as well as savings and carbon reduction. This helps us manage energy efficiently.
AUO’s solar energy has moved from generating power to also storing energy. We provide complete hardware and software solutions. Our actions support our goal of reaching net-zero carbon emissions. We also include the topic of net-zero in our environmental education to promote sustainability.
This concludes the tour. Thank you for listening. You are welcome to take photos outside as souvenirs.
